Subject: RE: CTP Project Kellogg Idaho (UNCLASSIFIED)

CLASSIFICATION: UNCLASSIFIED

Joe, thank you for the email and the list of concerns. Your concerns are understood and we are very sensitive to insuring that our contractors do not cause damage to existing utilities/etc. I have passed these concerns on to our contractor (AMEC FW) so that they are aware and also so that they have your direct contact information. As the design-build contractor for this project, they will be responsible for coordinating directly with all utility owners/managers as they develop their design to vet the kinds of concerns that you've identified below. The direct points of contact with AMEC who will be coordinating with you to insure all concerns are addressed are as follows:

Eric Reitter, Design Quality Control Manager - (978)467-5757 Eric.Reitter@amecfw.com
Randy Huffsmith, Project Manager - (406)204-0254 Randy.Huffsmith@amecfw.com

As far as when the groundwater collection system will be constructed, that won't happen until the 2018 construction season. The path ahead for this season is primarily design work with some minimal field work that we expect will happen later in the summer. This season's work will likely include demolition of certain components at the CTP, installation of the interim treatment system, geotech analyses for design, some onsite utility and site work at the CTP, and installation of monitoring wells. Although our contractor will have the lead role for coordinating with you and other entities as they develop their design, please feel free to contact me directly if you have concerns or questions.

Thanks,
Rod Zion

Subject: [EXTERNAL] CTP Project Kellogg Idaho

Mr. Zion,

I understand you are the contact person for the EPA- CTP and collection system upgrade at Kellogg Idaho. I need to convey to the contractor and you doing the collection system that our main interceptor is really close to the new collection system that I understand is being constructed. We have CCTV'd our interceptor line in 2014 because we were

under the impression that this project was to start in 2015. Please let me know when you plan to construct and I would like to attend any pre-con meetings concerning the collection system because I have these concerns:

- * Repair couplings and pipe must be immediately available to repair our Interceptor in case the contractor damages our pipe.
- * By-pass pumping must be available and be capable of pumping, depending on the time of year at least 8mgd (current flows today)
- * We will CCTV interceptor lines before and after construction , the contractor will be held responsible for any damage / repairs to the pipe.

I would also like to have any "as-build" drawings of the collection system close to our system for my file. Also any drawings prior to construction of the collection system.

If you have any questions or would like to discuss my concerns please feel free to contact me by email or phone.

Thanks Joe Close
